

# Trinity Heather Slate

Wallace International

slate  
uk

Trinity slate has been quarried in Newfoundland Canada since the 1850s. As early as the 1860s slates from this quarry situated on the East shores of Newfoundland were shipped to the British Isles.

The Cambrian formation similar to the World famous slate deposits in Wales which date back over 500 million years means the Trinity slates were subjected to the greatest metamorphic compression, as a result they are one of the hardest and most durable slates in the World.

Trinity Heather Slate is suitable for the most Prestigious projects, When installed in accordance with the correct standard the slate will outlast the lifetime of the building.

If you are looking to install or specify a roof of the highest quality available then Trinity slate should be considered. Wallace Slate UK are proud to offer Trinity slate for the UK market, our exclusivity for the UK market allows us to offer a second to none service with considerable stocks of Trinity slate being available from our UK stocks.
