

Permavent Easy Soaker Singles

Permavent Easy Soaker Singles are specially designed as neat individual soakers for use with all types of natural slates, even at a low pitch. They are made from highest grade high impact plastic and incorporate our unique super seals that form a flexible permanent seal between the slates, which prevent water from creeping sideways. Easy Soaker Singles are quick and easy to install every time and it's our super seals that stop the water from tracking across the soaker and entering the roof space (angle of creep). These allow the soaker to be narrower and yet perform much better than any other soaker available.
