

# Truthville Unfading Red Slate

Truthville Unfading Red Slate is a very unusual and rare stone. It is quarried in Vermont in the USA and has superior aesthetic properties and performance, of a unique red colour and rich texture combined with exceptional longevity. The slate can either be used for the whole of a roof elevation or, as in many instances, as a feature band or panel within the roof.

The rich red colour in this unfading slate can be often be marked with flashes of Charcoal Grey or even Green. It has a relatively even cleft, is exceptionally strong and dense, with a low absorption rate, and is resistant to freeze-thaw cycles.

The slate is tested to ASTM Grade A
